

## Artix-runit Installing guide.

1. cfdisk (to make all the partitions)
2. mkfs.ext4 (root, home) mkfs.fat -F32 /dev/sda(x)
3. mount /dev/sda(x) /mnt ; mkdir /mnt/boot ; mount /dev/sda(x) /mnt/boot
4. basestrap /mnt base base-devel runit elogind-runit linux linux-firmware vim
5. fstabgen -U /mnt >> /mnt/etc/fstab
6. artix-chroot /mnt
7. vim /etc/pacman.d/mirrorlist
8. **In -sf /usr/share/zoneinfo/America/Matamoros /etc/localtime**
9. hwclock --systohc
10. vim /etc/locale.gen  
en\_US (both UTF-8 and ISO)
11. locale-gen
12. **vim /etc/locale.conf**  
LANG=en\_US.UTF-8
13. pacman -S networkmanager networkmanager-runit grub os-prober efibootmgr
14. **In -s /etc/runit/sv/NetworkManager /etc/runit/runsvdir/default/**
15. vim /etc/hostname
16. vim /etc/hosts

```
127.0.0.1    localhost
::1         localhost
127.0.0.1    artix.localdomain artix
```

17. grub-install --target=x86\_64-efi --efi-directory=/boot --bootloader-id=GRUB
18. grub-mkconfig -o /boot/grub/grub.cfg
19. passwd

### 20. update the mirrors for further problems with LARB's script

First updates the mirrors:

Pacman -Syu

Vim /etc/pacman.conf (add this:)

```
[extra]
Include = /etc/pacman.d/mirrorlist-arch
[community]
Include = /etc/pacman.d/mirrorlist-arch
[multilib]
Include = /etc/pacman.d/mirrorlist-arch
```

Vim /etc/pacman.d/mirrorlist-arch

\*comment the worldwide mirrors, and uncomment the USA mirrors.

21. Last but not least. Install: brightnessctl pulseaudio (for brightness and audio control)

Installing LARBS (because I like it):

1. curl -LO larbs.xyz/larbs.sh
2. sh larbs.sh
3. wait until the script finish.
4. **Enjoy**
